

Poster

-
- P01 FCI Truncation for Solving the Electronic and Nuclear Schrödinger Equations
Anderson J. S. M., Shimzu N, Zadeh F. H, Otsuka T, Ayers P. W.
-
- P02 Quantum Monte Carlo simulations of Ti₄O₇ Magnéli phase
Anouar Benali, Luke Shulenburger, Jaron Krogel, Xioliang Zhong, Paul Kent, Olle Heinonen
-
- P03 Analytical Gradients for the Effective Fragment Molecular Orbital Method
Colleen Bertoni, Mark Gordon
-
- P04 Novel electron correlation methods in actinide chemistry
Katharina Boguslawski, Paweł Tecmera, Paul W. Ayers
-
- P05 *W_nX*: Efficient Composite Procedures with Explicitly-Correlated Coupled-Cluster
Bun Chan, Leo Radom
-
- P06 HORTON: An Open Source Quantum Chemistry Package For Idea Development
Matthew Chan, Toon Verstraelen, Katharina Boguslawski, Cristina Gonzales, Farnaz Heidar Zadeh, Tae Won Kim, Paweł Tecmer, Paul W. Ayers
-
- P07 Stability, Reactivity and Dynamics of Confined Systems
Pratim Kumar Chattaraj
-
- P08 Projected CAP/SAC-CI method with smooth Voronoi potential for calculating resonance states
Masahiro Ehara, Ryoichi Fukuda, Thomas Sommerfeld
-
- P09 Applications of the fragment molecular orbital method to geometry optimizations of large molecular systems
Dmitri G. Fedorov
-
- P10 The electronic structure of the carbonyl group: a topological approach for its $n \rightarrow \pi^*$ electronic excitation
David Ferro-Costas, Ángeles Peña-Gallego, Ricardo A. Mosquera
-
- P11 Scalable quantum chemistry with overlapping orbitals
Graham D. Fletcher
-
- P12 Modeling molecular systems at extreme pressure
by an extension of the PCM based on the SAC-CI method
Ryoichi Fukuda, Masahiro Ehara, Roberto Cammi
-
- P13 Rapid algorithms of electron repulsion integral for heavy-element systems
Masao Hayami, Junji Seino, Hiromi Nakai
-
- P14 Modeling electrostatic penetration in QM/MM calculations through Slater functions: Describing a solvated electron using a QM/Statistical mechanic method.
Jose M. Hermida-Ramón
-

-
- P15 Development of ACP Middle Layer Communication
Library for Molecular Orbital Calculation
Hiroaki Honda, Yoshiyuki Morie, Takeshi Nanri, Toshiya Takami
-
- P16 Development of an Efficient Computational Method for Proton Binding Energies
Yasuhiro Iwabata, Yusuke Tsukamoto, Hiromi Nakai
-
- P17 RHF calculation based on Primitive Basis Functions for improving SIMD operation efficiency
Noriaki Imamura, Hiroaki Honda, Yuichi Inadomi, Takeshi Nanri
-
- P18 Quantum chemical approach for condensed-phase thermochemistry : a harmonic solvation model
Atsushi Ishikawa, Hiromi Nakai
-
- P19 SMASH: Massively Parallel Program for Quantum Chemistry Calculations
Kazuya Ishimura
-
- P20 Basis set limit molecular properties using multiwavelets
S.R. Jensen, T. Flå, L. Frediani
-
- P21 Massively parallel RI-MP2 geometry optimization calculations on K computer
Michio Katouda, Takahito Nakajima
-
- P22 Theoretical investigation of magnetic interaction in molecular spin systems by the DMRG-CAS method
Takashi Kawakami, Toru Saito, Sandeep Sharma, Keiji Kinoshita, Mitsuo Shoji, Yu Takano, Shusuke Yamanaka, Mitsutaka Okumura, Kizashi Yamaguchi
-
- P23 Perturbative triples correction for explicitly correlated Mukherjee's state-specific coupled cluster method
Stanislav Kedžuch, Ondřej Demel, Jozef Noga, Jiří Pittner
-
- P24 Orbital optimization in the active space decomposition model
Inkoo Kim, Shane M. Parker, Toru Shiozaki
-
- P25 Finite-temperature MP2 and density-matrix Laplace MP2: The relation between them and their application to the divide-and-conquer method
Masato Kobayashi, Tetsuya Taketsugu
-
- P26 Enhanced convergence for density matrix embedding theory
Joshua S. Kretchmer, Garnet Kin-Lic Chan
-
- P27 A General Methodology for Decomposing the Interaction Energy: Application on the Interaction of Biomolecular Units with Graphene Structures
Marcos Mandado, Ignacio Pérez-Juste
-
- P28 Electronic Structures and Intermolecular Interactions of Co(II) Complexes: Important Factor of Spin-crossover
Masayuki Nakagaki, Sinji Aono, Shigeyoshi Sakaki
-

-
- P29 Efficient calculations with Multi-site local orbital basis functions in order- N DFT code CONQUEST
Ayako Nakata, David R. Bowler, Tsuyoshi Miyazaki
-
- P30 Novel applications of relativistic coupled-cluster (RCC) methods in atomic systems
Dillip Kumar Nandy, Bijaya Kumar Sahoo, Yashpal Singh
-
- P31 Recent advances in divide-and-conquer density-functional tight-binding molecular dynamics simulations
Yoshifumi Nishimura, Hiroaki Nishizawa, Masato Kobayashi, Stephan Irle, Hiromi Nakai
-
- P32 Scalable *ab initio* Dynamics with the Fragment Molecular Orbital Method
Spencer R. Pruitt, Hiroya Nakata, Olaseni Sode, Takeshi Nagata, Yuri Alexeev, Graham D. Fletcher, Dmitri G. Fedorov, Kazuo Kitaura, Mark S. Gordon, Gregory A. Voth
-
- P33 Computational Study of AgAu_n (n=1-7) Nanoalloy Clusters Invoking DFT Based Descriptors
Prabhat Ranjan, Tanmoy Chakraborty
-
- P34 How to Improve Performance of the Gaussian Program on the Infiniband Cluster
Ivan V. Rostov
-
- P35 Recent Improvements to GAMESS
Michael W. Schmidt
-
- P36 Overall linear-scaling two-component relativistic scheme and its extension to molecular properties
Junji Seino, Yuya Nakajima, Hiromi Nakai
-
- P37 Development of GPU-accelerated FMO Program with OpenFMO and its Performance Benchmark
Hiroaki Umeda, Toshihiro Hanawa, Mitsuo Shoji, Taisuke Boku, Yasuteru Shigeta
-
- P38 Spin-flip long-range corrected TDDFT study on the excitation energies of extended systems
Raman K. Singh, Ayako Nakata, Takao Tsuneda
-
- P39 Toward Improvement of DSSC through Calculation of Lifetime
David Sulzer, Satoru Iuchi, Koji Yasuda
-
- P40 Full internally contracted MRCI (FIC-MRCI) based on GUGA and hole-particle symmetry
Bingbing Suo, Yibo Lei, Yubin Wang, Zhenyi Wen
-
- P41 A quantum informational approach for dissecting chemical reactions
Pawel Tecmer, Katharina Boguslawski, Corinne Duperrouzel, Paul W. Ayers
-
- P42 Shell closing model in NbGe₁₆⁺ superatom: A density functional investigation
Ravi Trivedi, Kapil Dhaka, Debashis Bandyopadhyay
-
- P43 Origin of directionality of hydrogen bond and halogen bond: Effects of anisotropic charge distributions on atoms
Seiji Tsuzuki, Tadafumi Uchimar
-

-
- P44 (1) Study of Reaction Mechanisms of Peptide Bond Formation
Vladislav V Vasilyev
- (2) Quantum Molecular Dynamics Study of Ferrocene Conformers
Vladislav V Vasilyev, Feng Wang
-
- P45 General-order spin-free coupled cluster method: generation and simplification using permutation group techniques
Cong Wang, Gerald Knizia
-
- P46 Non-uniqueness of density matrix functionals based on the eigenvalues of 1-matrix
Jian Wang
-
- P47 Molecular orientation search using Generalized Scaled Hypersphere Search method with Quaternion
Hideo Yamakado, Yoshitomo Kodaya, Koichi Ohno
-
- P48 Analysis method using natural orbitals of difference density matrix for post-Hartree-Fock results
Daisuke Yamaki
-
- P49 Nearsightedness of Electronic Matter in Finite Model
Yuki Mitsuta, Shusuke Yamanaka, Takashi Kawakami, Mitsutaka Okumura
-
- P50 A divide-and-conquer method with approximate Fermi levels for parallel computations
Takeshi Yoshikawa, Hiromi Nakai
-
- P51 A model simulation of alkaline lignin hydrolysis by combining MD and CRD methods
Chin Hui Yu, Timm Lankau
-
- P52 Theoretical Study on the Sulfur Transfer in Mercaptopyruvate Sulfurtransferase
Gou-Tao Huang, Jen-Shiang K. Yu
-
- P53 Density matrix embedding theory towards high-temperature superconductivity
Bo-Xiao Zheng, Garnet Chan
-
- P54 Photoisomerization reaction mechanisms of O-nitrophenol revealed by analyzing intersystem crossing network at the MRCI level
Chaoyuan Zhu, Chao Xu, Le Yu, Jianguo Yu
-
- P55 Unusual bonding modes of perfluorobenzene in its polymeric (dimeric, trimeric and tetrameric) forms: Entirely negative fluorines interacting cooperatively with entirely negative fluorines
Pradeep R. Varadwaj, Arpita Varadwaj, Bih-Yaw Jin
-
- P56 Density-functional tight-binding combined with the fragment molecular orbital method
Yoshio Nishimoto, Dmitri G Fedorov, and Stephan Irle
-

P57 Comparison study of various gate control mechanisms to realize sub 60 mV/decade switching in FET

Tomoya Ishida, Kensuke Fukushima, Kenji Sasaoka, Matsuto Ogawa, Satofumi Souma

P58 Analysis of shape dependence of optical absorption characteristics in coupled quantum dots arrays

Yohei Muto, Kenji Sasaoka, Satofumi Souma, Matsuto Ogawa

P59 Simulation study on the performance of FET with Dirac fermion carrier

Miku Tanaka, Kenji Sasaoka, Matsuto Ogawa, Satofumi Souma
